

## Modules, Subroutines, Procedures, Functions, or Methods

- COBOL, RPG, and BASIC programmers are most likely to use “subroutine”
- You are never required to break a large program into modules, but there are at least four reasons for doing so:
  - Modularization provides abstraction
  - Modularization allows multiple programmers to work on a problem
  - Modularization allows you to reuse your work
  - Modularization makes it easier to identify structures
